13	...spending money got you or your family into trouble? <input type="text" value="hypomania"/>	No	0

AI Interpretation by Claude (Anthropic)

claude-sonnet-4-20250514

This is a sample preview of the AI-powered narrative report you receive after completing the BIPOLAR screening. The full report is generated by Claude AI based on your specific answer pattern across every item, producing a personalized interpretation that goes well beyond the raw score. Your example score sits in the middle of the distribution, which means roughly half of respondents score higher and half score lower. This is a useful baseline

for interpreting clinical thresholds: a score in this range is neither minimal nor clinically elevated, and the meaning depends heavily on context — your age, life circumstances, recent stressors, and the specific questions you endorsed most strongly. In a real report, this section would highlight the two or three items you rated highest and explain why they matter clinically. It would point to the validated cut-off for this instrument, compare your pattern to the relevant peer group, and discuss the most common reasons people score at your level. When subscale scores are available (for example, attention versus impulsivity, or social versus sensory dimensions), the narrative breaks down each cluster and identifies which one is driving your overall score. Practical recommendations follow: lifestyle adjustments backed by recent research, when to consider a professional evaluation, and which specialist is best placed to follow up — primary care, psychologist, psychiatrist, occupational therapist, or sleep clinic depending on the test. The report also lists the published reference for the instrument so you or your clinician can verify the methodology. This screening is not a diagnosis. It is a structured starting point for a conversation with a qualified professional.

Important Notice

This report is a screening tool only and does not constitute a medical or psychological diagnosis.

This test does not replace a professional evaluation. For a reliable diagnosis, please consult a neuropsychologist, psychiatrist, or qualified healthcare professional.
